The formats of the pre-lab quizzes are set up as they are for a reason. Throughout your career, in any discipline in which you finally choose to work, you will frequently be expected to work as a member of a team or committee. You will often find that not every member puts in an equal amount of effort and you will need to figure out a way to deal with this.

Therefore in lab if one of the members of your lab group takes the quiz and gets a poor grade how will the rest of the members handle this so it does not happen in future. For example, other members of your lab team could have a talk with the offending member to determine why he/she couldn't answer the questions - did he/she not prepare, did he/she prepare, but not understand the material. Based on this what recommendations can the group make to this individual to try to fix the problem.

Remember if your lab partner did not prepare or understand the material he/she will not be of much help to your group during the lab itself.

You will find this is good practice for handling such problems in the future, every bit as important, if not more so, than learning how to do a standard deviation or how to use a spectrophotometer.

If you read your syllabus you will see the pre-lab quizzes are only worth 5% of your lab grade, which is only 2.5% of your overall bio grade. Therefore it is extremely unlikely the pre-lab quizzes will make or break your final grade in this course.
Group Plan for Pre-Lab quizzes:

How will the group prepare for pre-lab quizzes?

How will the group coordinate their efforts? How will group members contact one another?

How will the group resolve conflicts?
